Subtask Sync between Team-Managed Projects Fails

Last Modified on 03/04/2024 8:33 am EST

Problem

When syncing subtasks between team-managed projects, the sync fails and responds with the error message:

Error detail:

"Field Field 'summary' cannot be set. It is not on the appropriate screen, or unknown.: summary."

Cause

The issue occurs because in team-managed projects subtask issue type is defined as a single word "Subtask":

Software project	oject Projects / Team Managed Project / Project settings / Issue types	ار Edit workflow	
Project settings Issue types	Subtasks track small pieces of work that are part of a larger task.		
Epic	Description fields O		
Bug	Aa Summary		
Story			>
V Task	Context fields ©		
Subtask	→ Status		
+ Add issue type	Assignee		

While in company-managed projects, the subtask issue type is spelled as "Sub-task" :

Company Managed Pr Software project	Issue types	Managed Project / Project settings	
Back to project	TES: Scrum Is	sue Type Scheme	
ssue types	Keep track of different	t types of issues, such as bugs or tasks. Each issue type can be configured different	ly.
ssue lavout	The issue type schem	e defines which issue types apply to this project. To change the issue types used, ye	ou can select a different issue type scheme
	Issue Type	Description	Workflow
Vorkflows	Story	Functionality or a feature expressed as a user goal.	- Software Simplified Workflow for Proj ect TES
ields	Bug	A problem or error.	Software Simplified Workflow for Proj ect TES
components	Epic	A big user story that needs to be broken down. Created by Jira Software - do n ot edit or delete.	
opsgenie	Task	A small, distinct piece of work.	← Software Simplified Workflow for Proj ect TES
	Sub-task	A small piece of work that's part of a larger task.	Software Simplified Workflow for Proj

The sync rules that define the subtask issue type in different projects should be different.

Solution

Use the following issue type for subtask sync between Team-managed projects:

```
issue.typeName = "Subtask" //Make sure to use the right subtask type here.
Product
```

Use the following issue type for subtask sync between Company-managed projects:

Release History 🖸				
issueltypeName = "Sub-task" //Make sure to use the right subtask type here.				
API Reference 🖓				
Security 🖸				
Pricing and Licensing 🔀
