

Search Limit on GitHub

Last Modified on 03/04/2024 9:39 am EST

Problem

When you do **Bulk Exalate** on a trigger in GitHub and you have more than 1000 issues, not all issues are synchronized.

It seems there is no indication that your search has hit this limit - there is no exception or error.

Cause

Due to the limitation of the GitHub API, the search is limited to 1000 issues.

This is a [known issue on GitHub](#).

It affects the Bulk Exalate operation if there are more than 1000 items fitting the search query you use to synchronize issues.

Solution

Modify the search query to select a subset of issues. For example, you can add a [date parameter](#) to the query.

The screenshot shows a GitHub search interface. At the top, there is a search bar with the query `is:open,created:2019-10-01`. Below the search bar, there is a navigation menu with the following items: Product, About Us, Release History, API Reference, Security, Pricing and Licensing, Resources, Academy, Blog, YouTube Channel, Ebooks, Still need help?, Join our Community, Visit our Service Desk, and Find a Partner. Each item has a small external link icon next to it.
