

System requirements to Install Exalate App On Premise

Last Modified on 03/11/2024 7:50 am EDT

Supported Operating System and Version

- [docker compatible OS](#)
- or [RPM-based Linux](#) (tested with CentOS 6, CentOS 7) - available HP ALM/QC

Virtualization Support

Exalate is a Tomcat application and can run on any virtual machine (VMware, VirtualBox, ...)

Network Interface Speed Requirements

- [requests](#) toward the other nodes should complete in under 120 seconds
- requests toward the connected issue tracker should complete in under 120 seconds

Memory Requirements(RAM)

At least 4GB of memory

CPU

A dual-core CPU, sufficient for syncing ~ 200 transactions per hour.

Storage Requirements (Disk Size)

Depends on the amount of synchronization you perform (especially attachment size, if attachments would be synchronized).

The minimal required Disk Space = (The application itself weighs less than 100 MB) + Java install (~200Mb) + Postgres Install (~200MB) + application data size.

One synced issue (with default sync rules) takes a couple of KBytes in the database for the duration of the transaction

The average disk space used: 762MB (application install+java+configuration) + 264MB (database) + 98MB (data)

Virus Protection Exclusions

Not tested with any. If you encounter any particular problems we can help you with resolving them.

Note: If you need help please [reach out to our support](#).
