

Getting started introduction

Last Modified on 03/12/2024 5:20 am EDT

Get started with your Source Destination integration journey here.

Source Destination integration can sync entities uni or bi-directionally.

To see the full list of available fields, please read the [Exalate API Reference for Source](#) and the [Exalate API Reference for Destination](#).

How to Set Up a Source - Destination Integration

Exalate needs to be installed as a dedicated app on both Source and Destination. So you need a valid Exalate license at both ends.

Note: Exalate supports decentralized integration. This allows you to control the outgoing and incoming information independently within Source and Destination. You can learn more about this feature.

Step 1: Install Exalate on Source

Step 2: Install Exalate on Destination

Step 3: Choose a Connection Type and Configuration Mode

Step 4: Set up a Connection

Step 5: Start Synchronizing

Product

Remember, it doesn't matter which side you start from, the process is the same.
