

How to Sync an Issue Key to the Summary Name in Jira On-premise

Last Modified on 04/02/2024 9:41 am EDT

This article shows how to copy an issue key from JIRA instance to a summary field in the twin issue on another JIRA instance.

Note: You can filter local issues by the remote key using JQL search.

Source Side

Outgoing sync

```
replica.key = issue.key
```

Destination Side

Add the code below to copy the remote issue link to the previously created custom field.

Incoming sync

```
issue.summary = replica.key
```

Congratulations! Now you know how to copy an issue key from one instance to the summary fields on another instance. Here is an example how it looks once you synchronize the issue.

The screenshot shows a Jira issue page for 'BLUE-1' (Type: Task, Status: TO DO, Resolution: Unresolved). The issue key 'BLUE-1' is highlighted in a red box. In the 'Issue Links' section, a link is shown: 'Exalated with BLUE-1 - My first synchronization issue123', also highlighted in a red box. The 'Sync Status' section shows 'Relation: blue-red' as 'SYNCHRONIZED' and 'Last Sync Date: 1 minute ago'. The 'People' section shows 'Assignee: Unassigned', 'Reporter: Admin Red', and 'Watchers: 1 Start watching this issue'. The 'Dates' section shows 'Created: 3 minutes ago' and 'Updated: 3 minutes ago'. The 'Attachments' section has a placeholder for dropping files. The 'Activity' section has tabs for 'All', 'Comments', 'Work Log', 'History', 'Activity', and 'Remote Issues'.
