

# How to Add a Remote Issue Key Field in HP ALM/QC

Last Modified on 04/08/2024 5:11 am EDT

**Warning:** We are moving Exalate for HP QC/ALM into basic maintenance mode. This transition period will last until November 2024, after which support will be halted completely. For more information, please see <https://exalate.com/blog/end-of-support-hp/>.

This article shows how to add a remote issue key field in HP ALM/QC.

Exalate allows displaying the remote issue key in a separate field. You can configure this field in the Exalate app for HP ALM/QC admin console.

## Sending Side

### Outgoing sync

You need to be sure that the other side includes the issue key in a replica. To send the issue key add this code

```
replica.key = issue.key
```

## Receiving Side (HP ALM/QC)

1. Navigate to **Connections** -> edit connection

Connection	Issues under sync	Last sync	Status	
 svitlana1_to_testsvitlana	1	TES-2 3 days ago	Active	<span>Edit connection</span>   

< 1 >

2. Select **Sync Rules** tab

 >> svitlana\_to\_hpqnode Active Publish

Triggers **Rules** Statistics Info

3. Add the field name

Issue Link field name

HP ALM field to populate with remote Jira issue key
