

How to Sync Stories in Exalate for ServiceNow

Last Modified on 03/20/2024 5:34 am EDT

In ServiceNow, stories are work units that can be completed within a sprint. Stories are available as part of the Agile Development application. You can sync stories with Exalate for ServiceNow.

ServiceNow

Outgoing Sync

Example of a script to send story data:

```
if(entityType == "story") {  
    replica.short_description = story.short_description  
    replica.description = story.description  
    replica.correlation_id = story.correlation_id  
    replica.correlation_display = story.correlation_display  
    replica.assigned_to = story.assigned_to  
}
```

This script sends data for the following fields of the story table:

- short_description
- description
- correlation_id
- correlation_display
- assigned_to

ServiceNow

Incoming Sync

Example of a script to receive story data:

```
if(entityType == "story") {  
    story.short_description = replica.summary  
    story.description = replica.description  
    story.correlation_id = replica.key  
    story.correlation_display = "IDalko-Jira"  
    story.assigned_to = nodeHelper.getUserByEmail(replica.assignee?.email)?.key  
}
```

With this script, we can sync data with Jira issues: summaries, descriptions, assignees.
