

Issue Sync from Jira On-premise to Jira Cloud

Last Modified on 03/25/2024 10:43 am EDT

With Exalate, you can sync issues bi-directionally or uni-directionally between multiple Jira Instances. One of the common use cases is Jira Cloud to On-premise synchronization.

Below you can see the configuration steps to set up sync between JIRA Cloud and JIRA Server.

Configuration steps:

1. Set up a Connection from your Instance
2. Send an Invitation to the Destination Instance
3. Make sure the Destination side has accepted the invitation
4. Synchronize issues.

For more information, please read [getting started guide](#).
