getUser

Last Modified on 04/15/2024 6:05 am EDT

> **Note**: For the method to work on Azure DevOps, make sure that the user is part of the team that has access to the Azure DevOps project.

Signature

Helper	nodeHelper
Signature	Jira Server: `getUser(String userKey)` Jira Cloud: `getUser(String accountId)` Azure DevOps: `getUser(String userKey), getUserByUsername(username: String)` is the same as `getUserByFullName(username: String)` Salesforce: `getUser(String userKey)`
Description	Returns a user object Null in case the user is not found
Introduced in	0.8

> **Note**: The Signature introduced in 0.8 works for Azure Devops until version 5.4.0.

Example use

Product

Set the local issue assignee based on the remote issue assignee using the method.
