

getVersion

Last Modified on 04/15/2024 5:59 am EDT

Signature

Helper	nodeHelper
Signature	<code>getVersion(String versionName, Project project)</code> <code>getVersion(String versionName)</code>
Description	Returns a version belonging to the project. Typically used to map the remote issue version to the local issue version. Returns null if the versionName is not found in the version map of the project
Introduced in	0.8

Note: The Signature introduced in 0.8 works for Github until version 5.4.0.

For Github 5.4.0 and higher

Helper	nodeHelper
Signature	<code>getVersion(issue: IHubIssue, versionName: String)</code>
Description	Returns a version belonging to the project. Typically used to map the remote issue version to the local issue version. Returns null if the versionName is not found in the version map of the project
Introduced in	5.4.0

Example use

```
// transfer all the versions
for (version : replica.affectedVersions) {
  issue.affectedVersions += nodeHelper.getVersion(version,issue.project)
}
```

Example use in Github 5.4.0

```
// transfer all the versions
for (version : replica.affectedVersions) {
  issue.affectedVersions += nodeHelper.getVersion(issue,version)
}
```
