

createComponent

Last Modified on 04/09/2024 7:52 am EDT

Signature

Helper	nodeHelper
Signature	<pre>createComponent(IHubIssue issue, String componentName, String description, String leadAccountId, String assigneeType)</pre>
Description	Creates a new IHubComponent in the project that the issue belongs to.
Introduced in	1.2.0

Parameters

issue	The issue where the component needs to be created
componentName	The component name
description	The description for the component, e.g. Database
leadAccountId	The account Id of a lead
assigneeType	The type assignee - can be one of following (strings) <ul style="list-style-type: none">• PROJECT_DEFAULT• COMPONENT_LEAD• PROJECT_LEAD• UNASSIGNED

Example use

```
issue.components = replica.components.collect {  
  remoteComponent -> nodeHelper.createComponent(  
    issue, remoteComponent.name, remoteComponent.description, null, "PROJECT_DEFAULT"  
  )  
}
```

Comments

- The Component is NOT automatically added to any of the fields of the issue.
- If a version with the same name already exists, then the existing component is returned and no new component is created.
- The component is created in the project where the issue resides.
- **Product**
Returns a component or null if the version could not be created.
- **Set *leadAccountId*** to 'null' in case no lead should be set.
- **Glossary**
When assigneeType is null, createComponent returns null.
