

getTableByName

Last Modified on 04/15/2024 5:34 am EDT

Signature

Helper	nodeHelper
Signature	getTableByName(String <code>tableName</code> , String <code>attributeName</code>)
Description	Looks up a value in the specified table and returns the corresponding row
Introduced in	4.6.4

Example use

Retrieve the assignment group with a certain name

- Assignment group is stored in the `sys_user_group` table

The screenshot shows the configuration page for the `sys_user_group` table. The 'Table' section is expanded, showing the following configuration:

- * Table: Task [task]
- * Type: Reference
- * Column label: Assignment
- * Column name: assignment
- * Label: Group
- * Name: sys_user_group
- Application: Global
- Extends table: (empty)
- Create module:
- Create mobile module:
- Add module to menu: -- Create new --
- New menu name: (empty)

The 'Reference Specification' section shows the following configuration:

- * Reference: Group
- Reference qualification: Add Filter Condition, Add "OR" Clause
- Filter conditions:
 - Type = null
 - or Type = itil

- Product Run

```
// look up assignment group and assign it to the problem entity
```

```
problem.assignment_group = nodeHelper.getTableByName("sys_user_group","CAB Approval")
```
