

getLocalIssueFromRemoteUrn

Last Modified on 04/15/2024 6:47 am EDT

Signature

Helper	nodeHelper
Signature	getLocalIssueFromRemoteUrn (String remoteUrn)
Description	Finds a local issue linked to the remote issue.
Introduced in	4.2.0

Parameters

remoteUrn	A key of the remote issue
-----------	---------------------------

The method was improved for Jira Cloud in 4.5 version to include.

Helper	nodeHelper
Signature	getLocalIssueFromRemoteUrn (replica.customKeys.parentURN, "entity_name")
Description	Returns BasicHubKey: the local issue key linked to the remote issue.
Introduced in	4.5.0

Example use

This method is used in External scripts to find the local issue using a key of the remote issue which is under sync.

Comments

Exalate uses this method to synchronize issues that have some relation in-between. For example:

- Epic and stories synchronization
 - [Product](#) Task and sub-tasks synchronization
 - [Issue Links](#) Synchronization
- [Glossary](#) [API Reference](#)

[Security](#)
