

addComment

Last Modified on 04/09/2024 7:50 am EDT

Signature

Helper	commentHelper
Signature	<pre>addComment(String body, List comments) or addComment(String body, Boolean sync, List comments)</pre>
Description	Allows adding a custom made comment to an issue. You can specify if this comment needs to be synced or not.
Introduced in	0.10

Usage

The addComment is a utility function that helps to do the following action on a comment:

- create a comment with the comment body set directly in the sync rules
- set the body to the provided function argument

The author of the comment is the [proxy user](#). If the body argument is empty, the comment is not synchronized.

Example use

Incoming sync

Add a comment with the following text to an issue *"Resolution changed to done"* . The added comment is synced to the remote side.

```
issue.comments = commentHelper.addComment("Resolution changed to done", issue.comments)
```

Usually, this method is used in combination with a condition block, for example :

Add a comment with the following text *"Resolution changed to done"* if the remote issue status is Done. Otherwise, sync comments in-between.

The added comment is synced to the remote side.

```
if (replica.status = "Done") {  
  issue.comments = commentHelper.addComment("Resolution changed to done", issue.comments)  
} else {  
  issue.comments = commentHelper.mergeComments(issue, replica)  
}
```

Don't sync the added comment to the remote side

Add a comment to the issue and don't sync it to the remote side using the sync parameter

```
issue.comments = commentHelper.addComment("Custom made comment", false, issue.comments)
```
