

filterLocal

Last Modified on 03/25/2025 9:54 am EDT

Signature

Helper	commentHelper
Signature	<code>filterLocal(List comments)</code>
Description	Return a list of comments where the visibility has not been restricted (no group or role level assign to the comment).
Introduced in	0.10

Example use

```
// ensure that only public comments are sent over to the remote instance
replica.comments = commentHelper.filterLocal(issue.comments)
```

Comments

You can restrict the visibility of the comments in JIRA to a particular group of users (i.e team members, or management ...).

To restrict comments sent to the remote instance, you need to specify the filter in the outgoing sync(data filter).

For Jira Service Desk 3.0 and higher

Jira has introduced internal comments, the `commentHelper.filterLocal` does not work in this case.

Please use the following code instead

```
Product
replica.comments = issue.comments.findAll { !it.internal }
```
