

commentHelper for HP ALM/QC

Last Modified on 11/23/2022 10:10 am EST

The commentHelper provides functions to manipulate comments.

Title	Description
mergeCommentsIntoCommentsArea	Merges all the comments contained in the replica variable with the already existing content on the HP QC comment area and return the content as a String.
getSingleCommentFromCommentsArea	Converts the HP ALM/QC comment area into a prepared Hub comment which can be used to set on the issue comments property.
