

getTestType(qcHelper)

Last Modified on 11/16/2022 9:50 am EST

Signature

Helper	qcHelper
Signature	<code>getTestType(testCaseTypeName String)</code>
Description	Returns a test case type object, that includes: id, name, description.
Introduced in	5.0.0

Example use

When creating a test case on the HP ALM/QC side, Exalate needs to have data for 3 required fields:

- `testCase.typeName` - Test type
- `testCase.parentId` - Parent test folder
- `testCase.summary` - Test name

This example helps to set the type name of the test case during the incoming sync.

```
testCase.typeName = qcHelper.getTestType("MANUAL").id
```
