How to Update a Local Custom Field with the Remote Issue Key in Jira On-premise

Last Modified on 04/02/2024 10:01 am EDT

This article shows how you can set the remote issue key into a local custom field.

Exalate allows you to update the source issue automatically once the synchronization is finished. You can do that with the help of the syncHelper.syncBackAfterProcessing method.

Incoming Sync (destination side)

```
if(firstSync){
  syncHelper.syncBackAfterProcessing()
}
```

Warning: Using `nodeHelper.syncBackAfterProcessing()` outside the `if(firstSync)` block might cause infinite loops.
