How to Generate a Security Token for Salesforce

Note: Personal access tokens are used to log in to Exalate for Salesforce.

Once Exalate has been configured and verified, you need the following data to log in:

- **Username** - issue tracker administrator user
- **Password** - consists of the issue tracker password and security token, without spaces

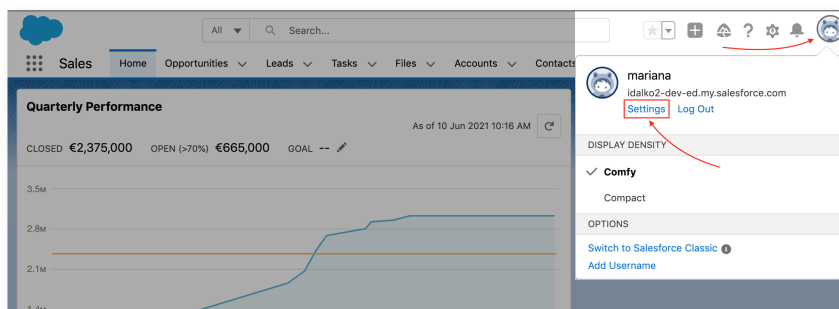

You can reset the security token from your Salesforce account.

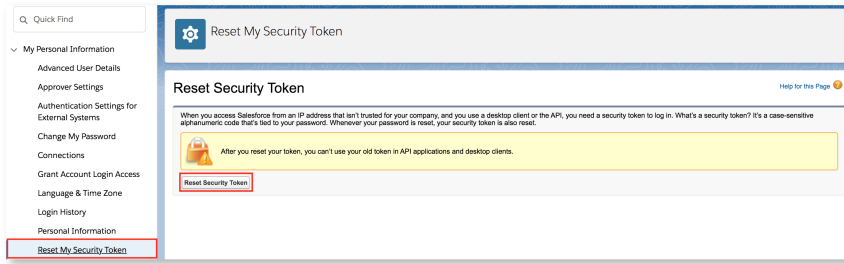

1. Log in to your Salesforce account.

The Salesforce user must be an organization member or have admin access to a repository where Exalate is installed.

2. Click the profile avatar and choose **Settings**.

3. Select **My Personal Information** → **Reset My Security Token**.

4. Check your email for the security token.
