

# Exalate for Jira Cloud: Displaying a remote issue link in a custom field

Last Modified on 04/03/2024 6:11 am EDT

This article shows how to synchronize the remote issue link to a custom field on destination instance.

## Destination side

1. Add a URL custom field. Let's name it `remotelIssueUrl` .

**Note:** Check out Atlassian documentation for more information about custom fields: [Adding a custom field](#)

2. Add the code below into the **Incoming sync**

```
1 // remotelIssueUrl is provided in the incoming sync script
2
3 issue.customFields."Remote issue URL".value = remotelIssueUrl
```

**Note:** "**Remote issue URL** " is the name of the custom field, you've created in the first step. You can change it to any custom name.
