Salesforce - Version 5.14.1

Released for Salesforce on July 22, 2024

In this release, we've resolved the following issues:

- XLT-5286 - Notify users about the upcoming node archival.
- XLT-4837 - [Pentest - Medium] Reflected Cross-Site Scripting (XSS).
- XLT-5285 - Email notifications backoff env variable.

We want to inform you about a recently identified bug affecting Exalate you can notice after upgrade. Our team is actively working on a fix, but in the meantime, we have found some workarounds to help mitigate the issue.

Issue Details: It is impossible to save HtmlToWiki in script rules, there problem with external scripts.
Affected Version: 5.14.1
Workarounds:

- Option 1: Commenting the HtmlToWiki part of the script unblocks you from using the connection in general.
- Option 2: Please contact our support team, we'll downgrade your instance to the previous version.

We understand the inconvenience this may cause and appreciate your patience as we resolve the issue. If you encounter any difficulties or need further assistance, please do not hesitate to reach out to our support team in any case.

Thank you for your understanding and continued support.
