

Introduction to SyncRoom

Last Modified on 04/30/2025 5:19 am EDT

SyncRoom is a central management system designed to simplify how you manage your connections and configure them across various Exalate nodes. With SyncRoom, there's no need to visit each node individually to set up connections. All your nodes and their connections are now accessible and manageable from one central console, streamlining your workflow.

In addition to the existing Exalate functionality, SyncRoom introduces exciting new features like **TestRun** and **Scripts Versioning**, bringing more control and flexibility to your integration processes.

The SyncRoom interface provides a clear and structured view of your network.

- On the **left side**, you'll find a list of all existing connections within your network. From here, you can easily navigate to a specific connection, modify its settings, deactivate it, or remove it from the network.
- On the **right side**, a visual representation displays how various nodes are interconnected, giving you an intuitive overview of your network structure.
- An **Import connection** button allows you to bring your existing Exalate connections into SyncRoom, so you can manage them from this central interface instead of the Exalate UI.

This centralized view ensures efficient connection management, helping you maintain a well-organized and fully integrated network.

The screenshot displays the SyncRoom interface for 'Network Orlando'. On the left, a sidebar lists 'MY NETWORKS' including 'Acquarius', 'Orlando', and 'Cassiopeia'. The main header shows 'Networks / Bootes' and the title 'Network Orlando'. Below the title is a placeholder text: 'Lorem ipsum dolor sit amet. Lorem ipsum dolor sit amet. Lorem ipsum dolor sit amet dolor sit amet.' The main content area is divided into two panels: 'Connections in Orlando' and 'Network visual'. The 'Connections in Orlando' panel shows a list of connections with search, sort, and edit options. The 'Network visual' panel shows a diagram of the network structure with nodes like 'PMs Team', 'Dev Team', 'Cloud Ops', and 'Support'.
