How to Sync Labels in Asana

This article describes how to synchronize labels (tags) between Asana and other systems.

Labels in Asana: Labels are called "tags" in Asana and are used to categorize tasks and projects. Tags that don't exist will be automatically created during synchronization.

Outgoing sync (Asana → Remote system)

To send labels from Asana to the remote system:

```
replica.labels = entity.labels
```

Incoming sync (Remote system → Asana)

To receive labels from the remote system and set them in Asana:

```
entity.labels = replica.labels
```

Add static labels

You can add fixed tags based on conditions:

```
entity.labels += nodeHelper.getLabel("Priority-High")
```
