How to Sync Milestones in Asana

This article describes how to mark tasks as milestones in Asana through synchronization scripts.

Milestones in Asana: Milestones are tasks that represent important project checkpoints. They appear with a diamond icon and are displayed prominently in Timeline views.

Incoming sync (Remote system → Asana)

To mark a task as a milestone in Asana:

```
entity.customFields."milestone".value = "true"
```

To convert a milestone back to a regular task:

```
entity.customFields."milestone".value = "false"
```

Outgoing sync (Asana → Remote system)

To send milestone status from Asana to the remote system:

```
replica.customFields = entity.customFields
```

Reading milestone status

To check if an incoming task is a milestone:

```
def isTaskMilestone = replica.customFields."milestone"?.value == "true"

if (isTaskMilestone) {
    // Handle milestone logic
    entity.summary = "⬥ " + replica.summary
}
```
