How to Sync Statuses in GitHub

Last Modified on 01/15/2026 5:32 pm EST

In this article, we describe how to sync status between instances GitHub and Jira.

You need to configure the mapping between statuses on both sides.

GitHub to Jira sync

GitHub Outgoing sync rules

Send local status to the remote side:

```
replica.status = issue.status
```

Jira Incoming sync rules

Set the local status based on the received status value from the remote side:

```
def statusMap = [

      // "remote status name": "local status name"
   "open" : "To Do",
        "closed" : "Done"    ]
def remoteStatusName = replica.status.name
issue.setStatus(statusMap[remoteStatusName] ?: remoteStatusName)
```

Jira to GitHub sync

Jira Outgoing sync rules

Send local status to the remote side:

```
replica.status = issue.status
```

GitHub Incoming sync rules

Set the local status based on the received status value from the remote side:

```
def statusMap = [

      // "remote status name": "local status name"
     "To Do" : "open" ,
        "Done" : "closed"     ]
def remoteStatusName = replica.status.name
issue.setStatus(statusMap[remoteStatusName] ?: remoteStatusName)
```

Alternatively, you can set the default local status using the getStatus node helper method.

```
issue.setStatus("status name")
```
