Object	option
Fields	id, sequence, disabled, parentOption, childOptions, value
Introduced in	0.5

An option is a possible value for a select list, radio button or checkbox.

Fields

#	Field name	Comment	Object type
1	id		Long
2	sequence	The sequence allows ordering the option in a list of options.	Long
3	disabled		Boolean
4	parentOption	In the case of a child option in a cascade, this value will contain the option of the parent.	Option
5	childOptions	In the case of a parent option in a cascade, this value will contain all the child options.	Array of options
6	value	Text of the option that you can choose from select list	String
