mergeComments—with custom formatting

Last Modified on 01/15/2026 4:47 pm EST

Signature

Helper	commentHelper
Signature	mergeComments(IHubIssue issue,IHubIssue replica, Closure commentChangeFn)
Description	Allows formatting the comment when merging remote comments. Use a closure to define how the merged comment body should be formatted.
Introduced	0.10

Example use

- Add custom formatting

```
// provide a custom format of the comment during update/create of comments
issue.comments     = commentHelper.mergeComments(issue, replica,
            {
            comment ->
            comment.body =
              "[" + comment.author.displayName +
                  "| mailto:" + comment.author.email + "]" +
                  " commented: \n" +
              "{quote}\n" +
              comment.body + ";\n" +
              "{quote}\n"
            })
```

- Use the script to impersonate the comment

```
// set the real comment author for all comments;  if the author is null set a default user
issue.comments = commentHelper.mergeComments(issue, replica) {
 if (it.author) it.executor = it.author
 else it.executor = nodeHelper.getUserByEmail("default user email"); it
}
```

Comments

- Any field available in the Comment object can be used to format the comment.
