Signature	<pre>createUser(String username, String password, String emailAddress, String displayName)</pre>
Description	Creates a new user with the provided information.
Introduced in	0.12.0

Example use

Destination side

Create/Change processor

```
def localUserForRemoteAssignee = userHelper.getByKey(replica.assignee.key)
if (localUserForRemoteAssignee == null) {
    // create the user if s/he doesn't exist
    localUserForRemoteAssignee = userHelper.createUser(replica.assignee.username,
        "changeme",
        replica.assignee.email,
        replica.assignee.displayName)
}
//add the user as a request participant
issue.customFields."Request participants".value += localUserForRemoteAssignee
```

Product

Comments

[About Us](#)

[Release History](#)

You can use this method in order to update request participants whenever the assignee of the issue is updated.
