TransitionAsExecutor

Last Modified on 02/10/2026 6:12 am EST

Signature

Helper	workflowHelper
Signature	transition(Issue issue, String transitionName, User executor)
Description	Transitions the issue using the transitionName on behalf of the issue executor
Introduced in	0.13

Example use

You can use this method in case the workflow has some restrictions such as conditions or validators.

```
// If only Anthony can do transition "Close"

def anthony = nodeHelper.getUser("anthony.hopkins")
if(issue.status.name == "In Progress" && replica.status.name == "Closed"){
  workflowHelper.transition(issue, "Close", anthony)
}
```

Comments

- The same remarks as listed with transition as proxyuser apply
- If the user doesn't exist Exalate raises an error
