getTestType(qcHelper)

Last Modified on 01/15/2026 3:57 pm EST

Signature

Helper	qcHelper
Signature	`getTestType(testCaseTypeName String)`
Description	Returns a test case type object, that includes: id, name, description.
Introduced in	5.0.0

Example use

When creating a test case on the HP ALM/QC side, Exalate needs to have data for 3 required fields:

- testCase.typeName - Test type
- testCase.parentId - Parent test folder
- testCase.summary - Test name

This example helps to set the type name of the test case during the incoming sync.

```
testCase.typeName    = qcHelper.getTestType("MANUAL").id
```
