

Jira Cloud: Automatically Unexalate issues moved to another project

Last Modified on 02/24/2026 11:10 am EST

This article applies to Exalate Classic only. If you're using the New Exalate experience, please refer to the [New Exalate documentation](#).

This article shows how to stop the sync automatically once the issue has been moved to another project.

Introduction

The synchronization is set up to sync issues from the specific project automatically.

Now, if the issue has been moved from the project under sync to another project which has a different workflow, the synchronization should be stopped automatically.

Jira On-Premise

Continue the sync, but don't apply any changes if the issue has been moved to another project.

Source side

```
if (!firstSync && issue.project.key != "HELP") {  
  return  
}
```

Destination side

```
if (firstSync && replica.project.key != "HELP") {  
  return  
}
```

Stop the sync if the issue has been moved

Source side

```
if (!firstSync && issue.project.key != "HELP") {
    final def _syncInitService = com.atlassian.jira.component.ComponentAccessor
        .getOSGiComponentInstanceOfType(com.exalate.api.trigger.ISyncInitiationService.class)
    _syncInitService.unexalate(issueKey.id as String)
    return
}
```

Jira Cloud

Continue the sync, but don't apply any changes if the issue has been moved to another project.

Source side

```
if (!firstSync && issue.project.key != "HELP") {
    return
}
```

Destination side

```
if (firstSync && replica.project.key != "HELP") {
    return
}
```

Stop the sync if the issue has been moved

Source side

```
if (issue.project.key != "HELP") {
    if (!firstSync) {
        syncHelper.unExalateAfterProcessing()
    }
    return
}
```
