How to Sync a Scripted Custom Field with a Text Custom Field on Jira On-premise

This article shows how to synchronize data from a *scripted custom field* on one side into a **text custom field** on the other side.

Source side

Add the code below to the **Data Filter** to send scripted custom field value.

```
replica.customFields."scripted custom field name" = issue.customFields?."scripted custom field name"
```

Destination side

Add the code below to the **Create/Change Processor** to get the value of the scripted custom field as a text.

```
issue.customFields."text custom field name".value = replica.customFields?."scripted custom field name"?.value?.getAsString()
```
