Sync an Assignee to a Text Custom Field in Exalate for Jira on-premise

Last Modified on 02/11/2026 9:29 am EST

This article shows how to synchronize an assignee to a text custom field.

Source side

Outgoing sync

```
replica.assignee = issue.assignee
```

Destination side

An assignee is an object with some properties. Each property is of type text. You can sync the following properties: key, email, displayName, username. Add the code below to the **Incoming sync** to sync Assignee email address.

```
issue.customFields."Your custom field name".value = replica.assignee?.email
```

You can replace the .email property with any other assignee object property.
Check User for all available properties. For example, to sync the assignee displayName use this code.

```
issue.customFields."Your custom field name".value = replica.assignee?.displayName
```
